

# NOW AVAILABLE

**Where EZ-LOAD convenience combines with machine reliability to save you the time, money and effort spent on unnecessary service work**

**\* Next to effortless machine refill procedure**

**\* Quick and easy coin collection from separate coin drawer**

**\* Protect your investment with a machine designed to discourage tampering and vandalism**

**\* Meet consumer needs with a wide range of EZ-LOAD products**

**FAST-AID**  
CENTER

# Fast-Aid quality doesn't cost. It pays!

## Fast Loading

**Take advantage of the fastest loading machine on the market with the Fast-Aid EZ-Load.** A wide selection of OTC medications and other products come vend-ready in plastic clamshells. The consistent size and firmness of the clamshells makes the products quick and easy to load. Just lift the refill channel tray out and hang it on the front of the machine and slip several products at a time into one of the four corresponding dispensing channels. That's it. You're done. No product containers to fill, no manual rotation required and no time consuming one-at-a-time placement of OTC packets around the loops of coil dispensing mechanisms. Just plain old EZ Load convenience!

Meet your needs with a wide selection of products. Check the EZ Load Supply list and if you don't see what you want give us a call to see if we can provide it.

## Durable

**Skip the headaches and expense of repair and replacement.** Fast-Aid Centers are constructed entirely of heavy-duty durable 16 and 18-gauge steel with a design that deters tampering and vandalism like no other. The baked-on powder coat finish provides easy cleaning and will last for years. A dispensing system with only five moving parts in combination with the vend-ready clamshells offers next to trouble free operation. If problems do occur a detailed owner's manual and responsive factory service department make it easy for owners to accomplish maintenance and repair at little or no cost.

## Reliable

**Avoid unnecessary service work and save time and money.** In addition to creating reliable vending with its consistent size, the clamshell gives each item to be dispensed enough weight and firmness so it can be placed in a vertical three-sided channel. All packets are then held securely in place and cannot fall loose as they move into position for dispensing or when the machine receives a bump or shake. This eliminates machine jamming and missed vends that are common causes for repeat service work in other machines.

## Tamper Resistant

**Don't invite tampering and vandalism.** The Northwestern coin mechanism used in the Fast-Aid Center is the industry standard when it comes to longevity and tamper resistance. The entire coin mechanism is metal and will last for years. It cannot be manipulated with a flat object or straw to free-vend products as adjustable or plastic coin mechanisms can. Coins are conveniently collected from a patented coin drawer under separate lock and key from the product compartment to provide added security if needed.

## Choice

**Your choice of coinage:** Order your machine to operate with a TOKEN, \$0.05, \$0.10, \$0.25, \$0.50, \$0.75 or \$1.00. If a change is needed an inexpensive coin wheel or new mechanism may be ordered. Either option will not compromise the security of the machine.
